

Deploy Securely certificate to iOS

Browse the installation url in **only Safari Browser** which is highly recommended for easy-going of installation and downloading .

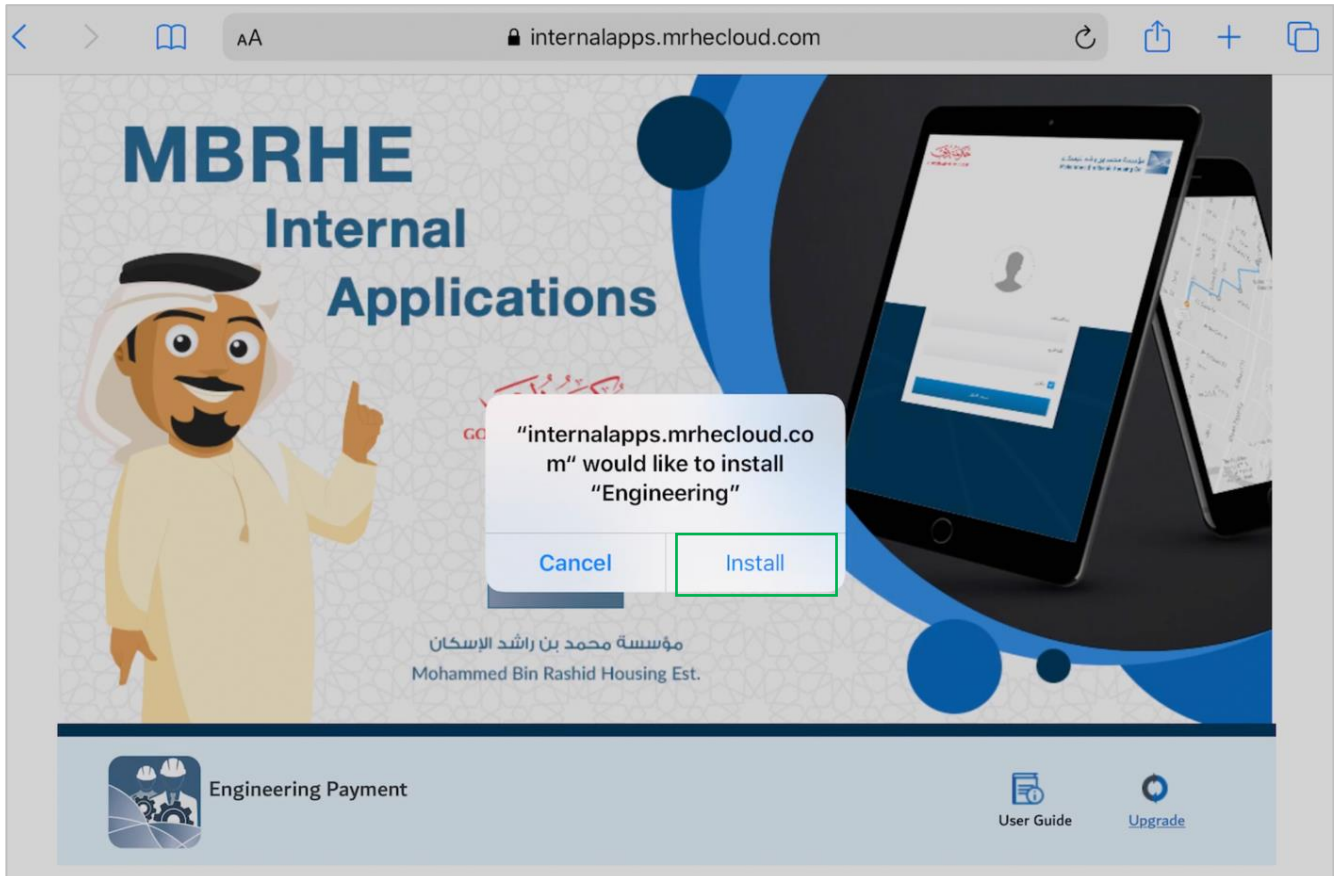

How to install the certificate securely?

Step1: Clicking **Download** option will show prompt for "Internalapps.mrhecloud.com" which allows installation of MBRHE internal applications

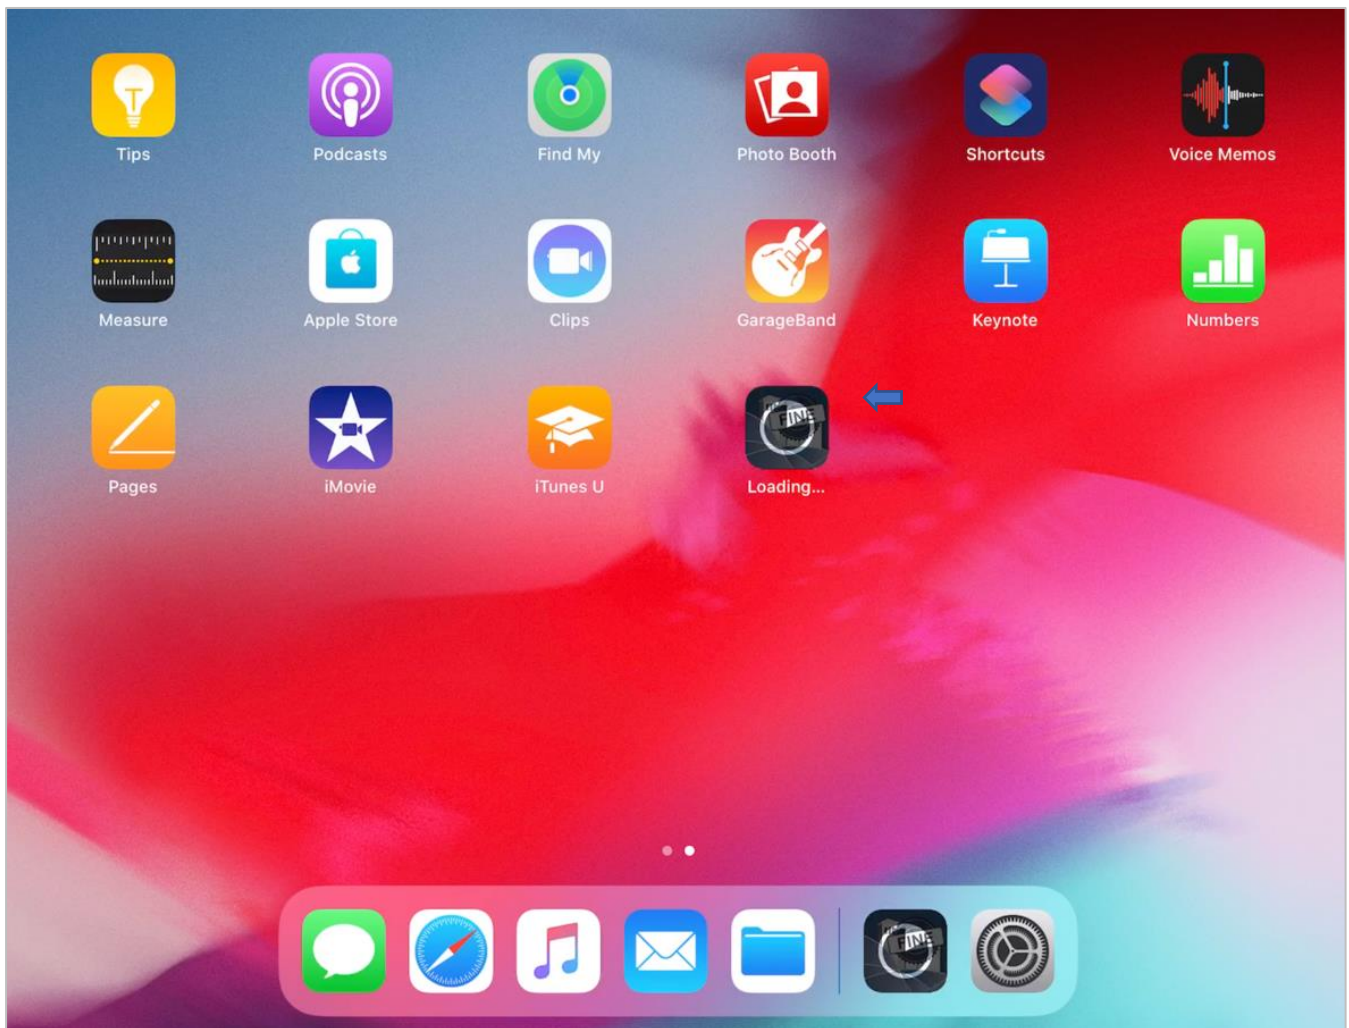

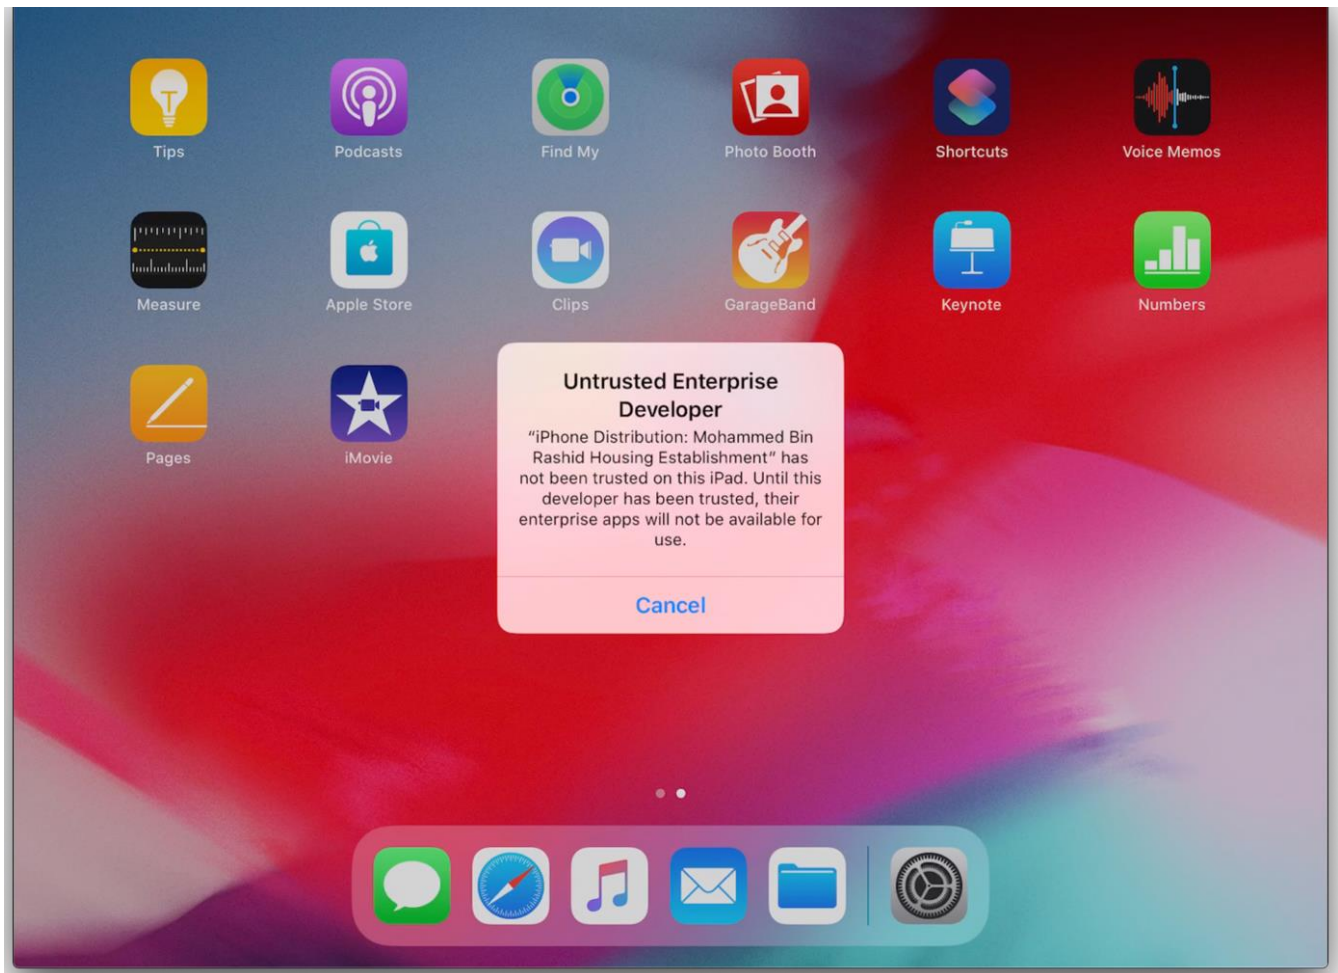

- The option **Upgrade** is displayed to update the application when it is installed already instead of **Download**

Step2: If the download was successful, it will install the application.

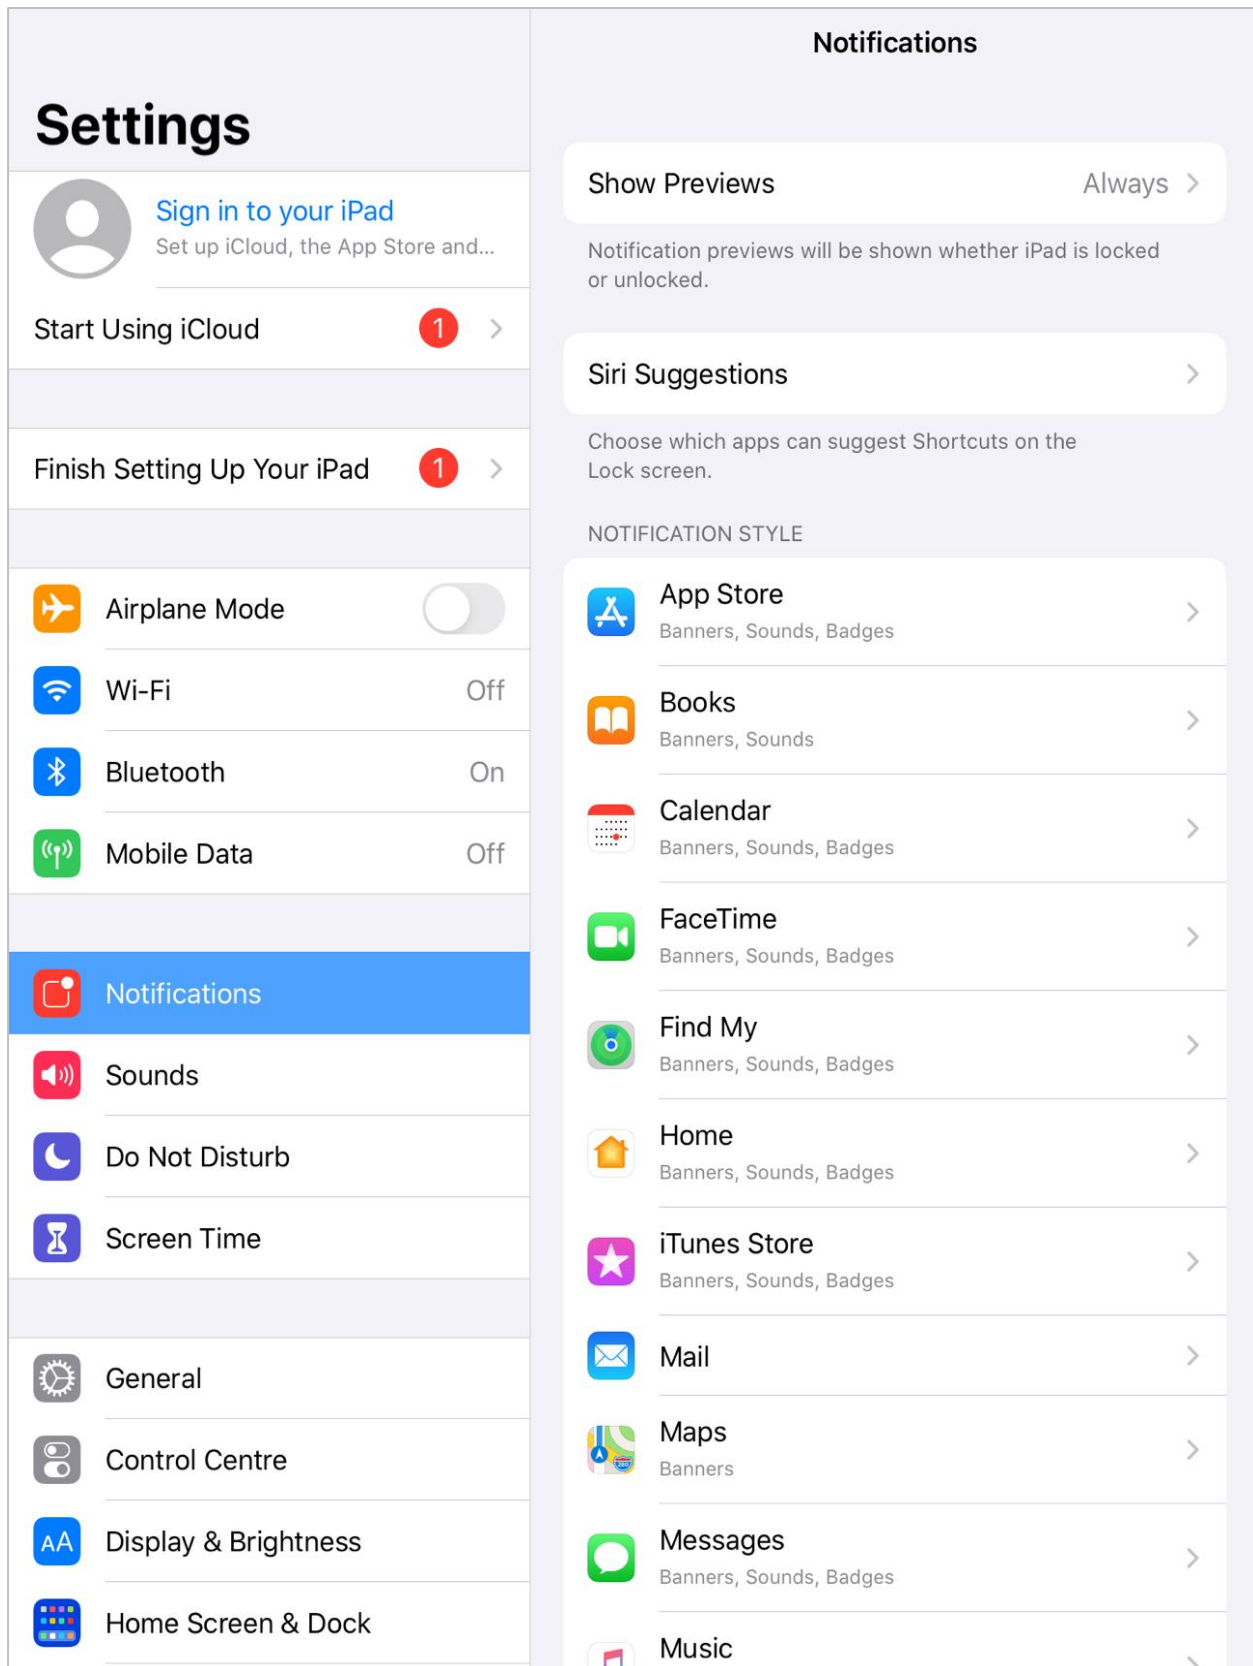

Step3: After installing the application. it will ask the prompt like below, Click on Cancel.

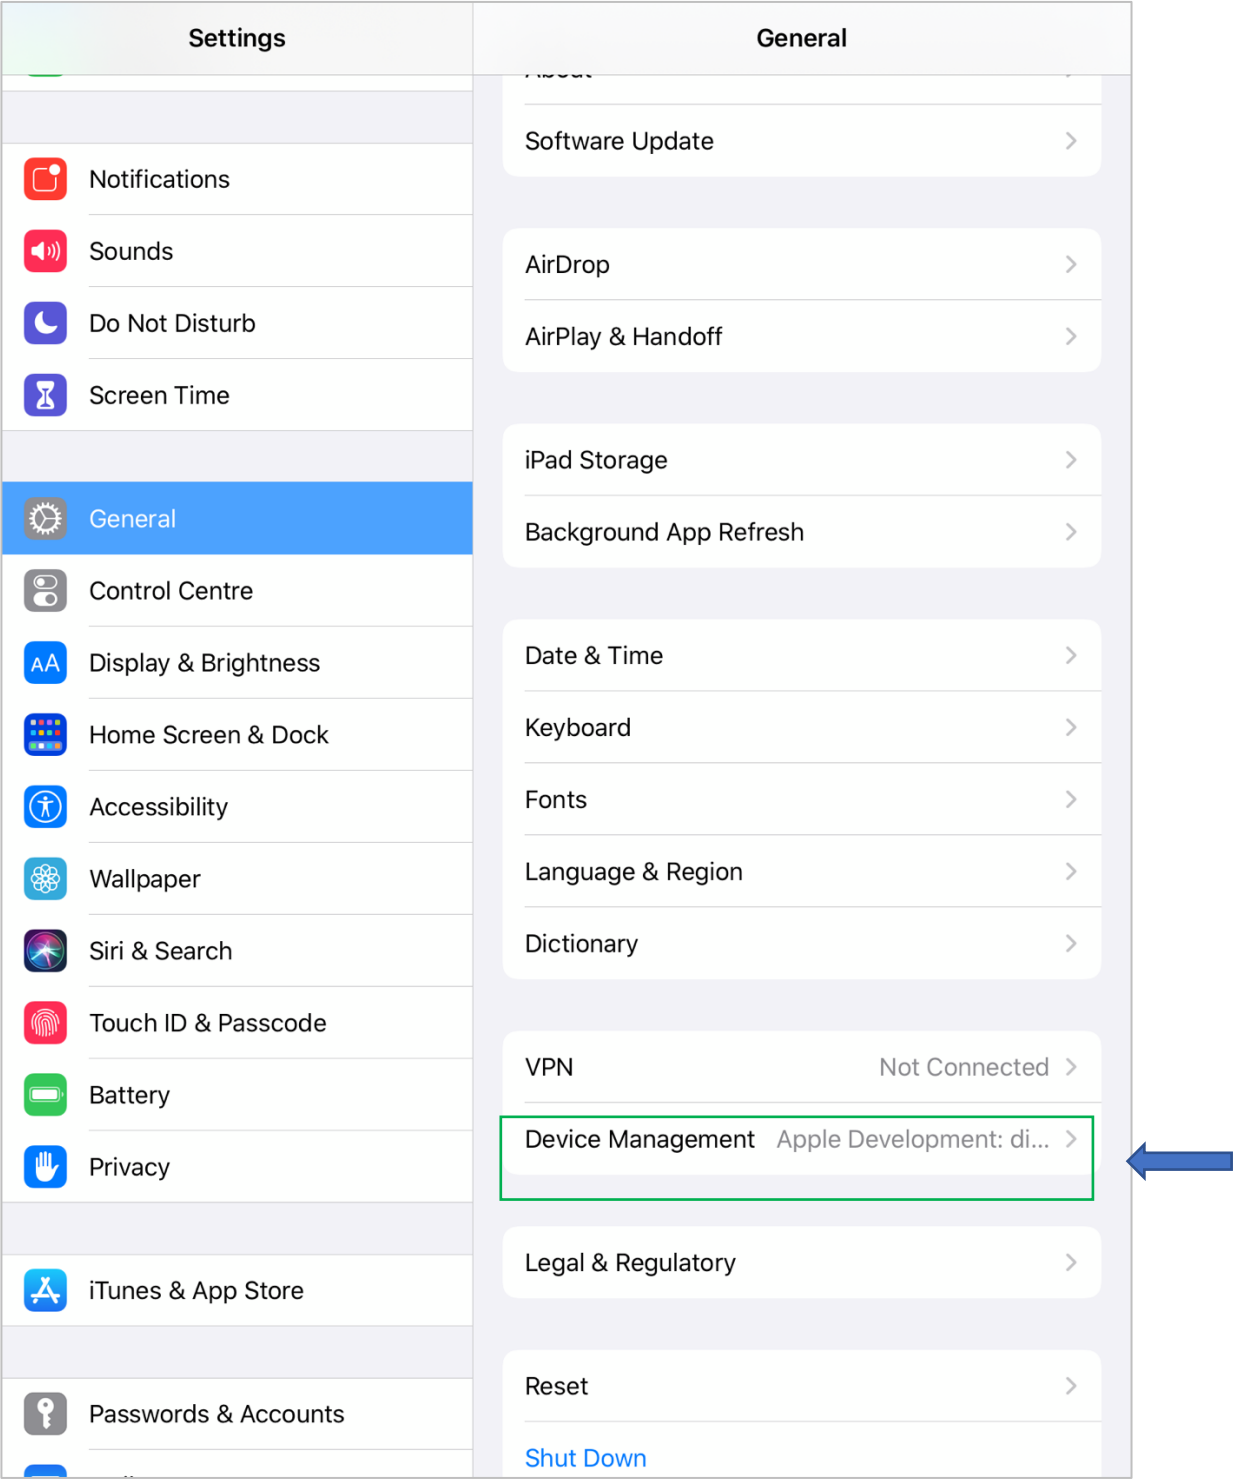

Follow the below steps to trust a certificate included in a profile.

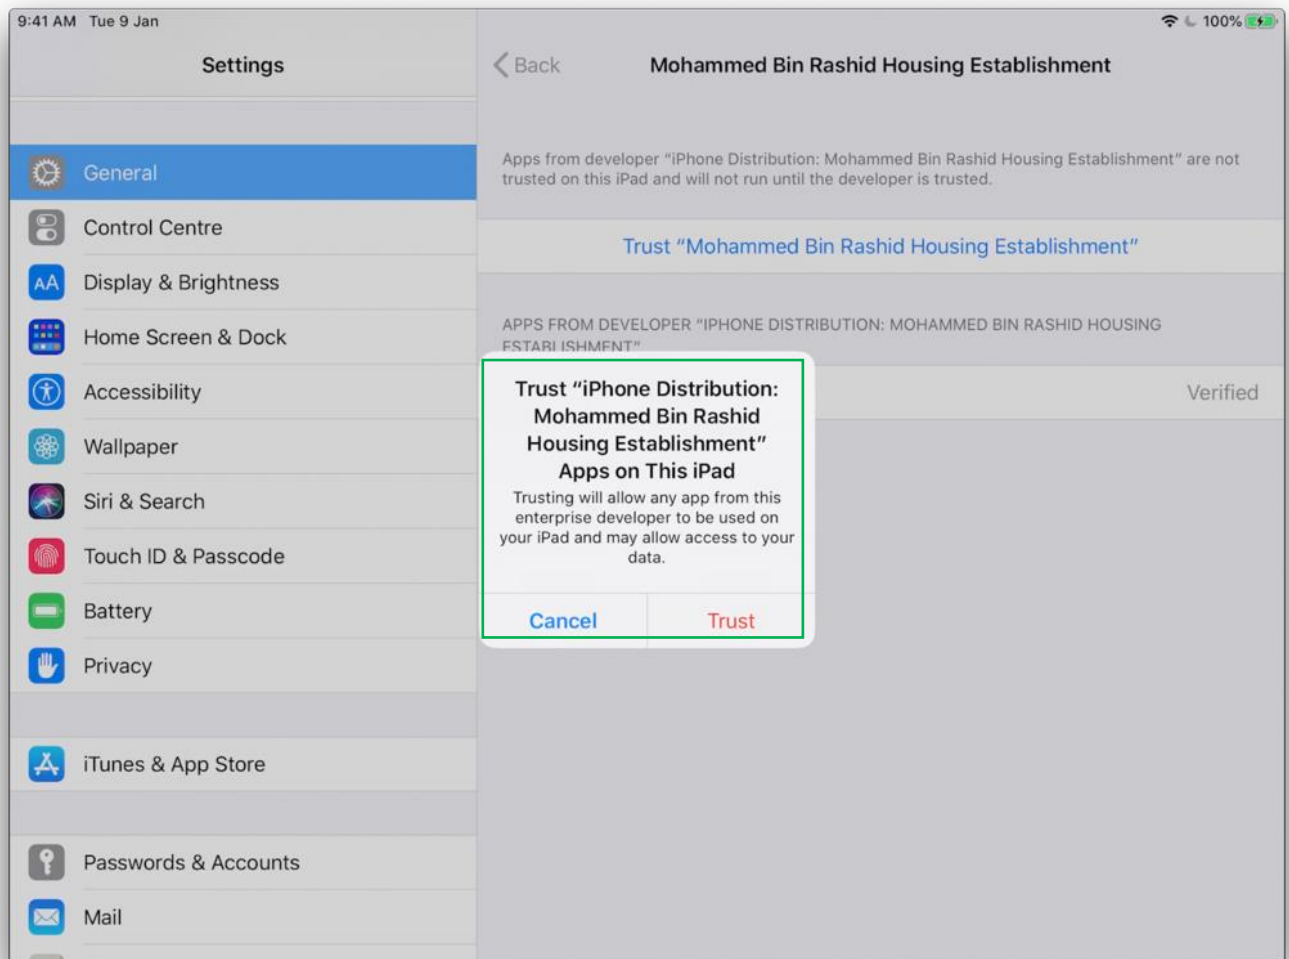

Step4: Open **Settings**.

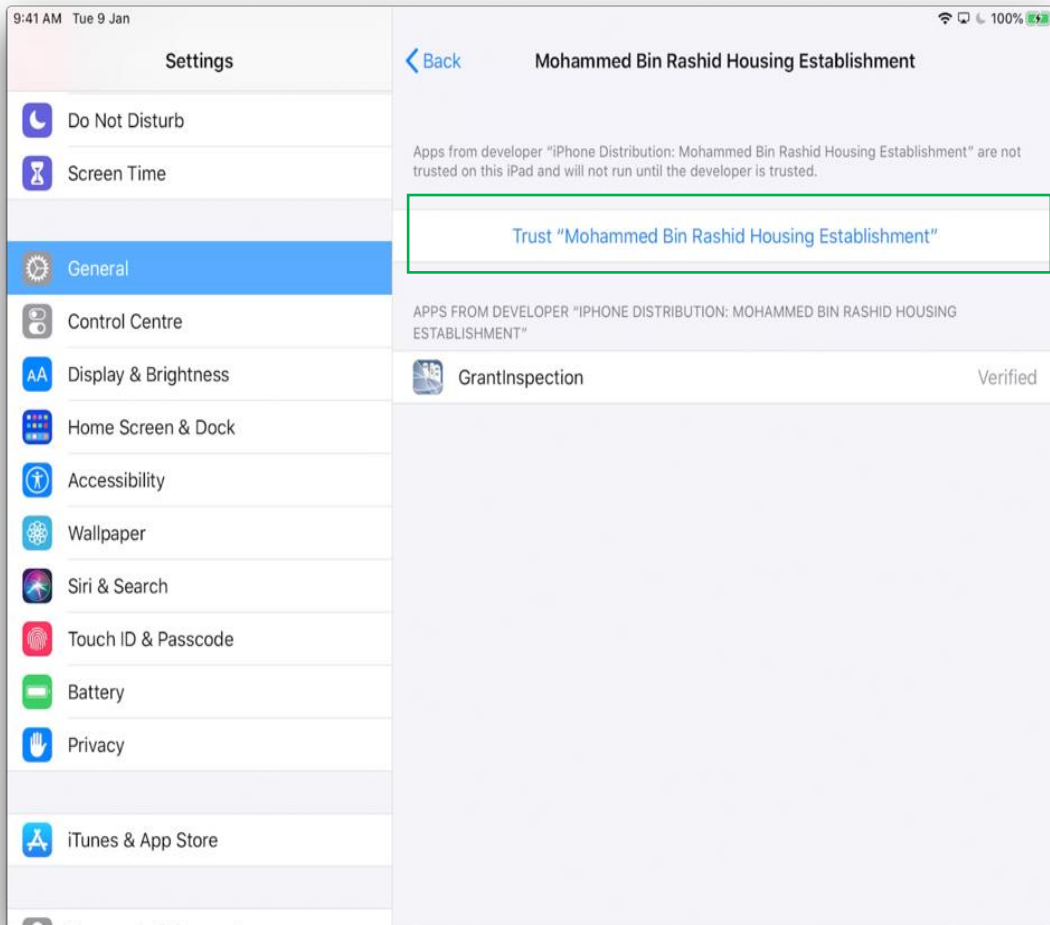

Step5: Navigate to **General** and then **About**.

Step6: Select Device Management.

Step7: Each root that has been installed via a profile will be listed below the heading Enable **Full Trust For Certificates**.

After the trust the profile, The applications will be listed with Associated profiles.
